

SEPTIC TANK TREATMENT 365

365 Is designed to maintain a healthy balance 365 days a year. To reduce the demand for pumping out tanks, remove odours and keep pipes flowing freely.

365 Contains a broad spectrum of selected bacteria that efficiently break down organic waste. Reducing sewage, fat, oil and grease to carbon dioxide and water.

Legislation puts the liability for final discharge with the owner; any leaching outside of their boundaries requires the neighbours consent.

A badly performing tank can have little effect on the waste, resulting in foul discharge and odour problems.

When used as directed **365** is completely safe. It is harmless to people, animals and the environment.

Using the automatic measure on the bottle just flush 10mls **365** down the toilet bowl each week.

365 is very effective, however performance will be reduced by the use of chemical cleaners such as Bleach. Wherever possible use biodegradable detergents.

365 Specification

Form:	Liquid
Colour:	Blue
Specific Gravity	As water
Contents:	Selected multi strain bacteria with additional growth stimulants and surfactants to depress surface tension and aid penetration

PACKAGING - 250mls bottles with easy to use 10ml measure and 1tr bulk packs
