## Bio Block Biological Fat and grease treatment

Slow dissolving - easy to use - safe and reliable - effective on all types of organic waste

Bio Block is a water soluble product that gradually dissolves over a 30 - 90 day period. The slow release provides a continuous supply of high performance bacteria that will break down fat and grease permanently. Ideal for situations of high water flow, difficult access points and isolated locations

Suitable for:

- Grease traps
- Collection tanks
- Pumping stations
- Wastewater treatment plants
- Settlement lagoons
- Interceptor tanks

The bacteria in Bio Block are able to reduce the build-up of fat and grease across a wide range of applications

A simple solution to common problems:

Bio Block keeps the bacteria where you want them to work

Overcomes the problem of unreliable manual application

Avoids the difficult and expensive installation of mechanical dosing

Bio Block is easily and safely installed by suspending the block into the water flow. This makes it practical and cost effective for use in

multiple areas of varying flow such as connecting drains or sewer systems.

**Specification:**

**Form:** 5 Kg Water soluble block

**Colour:** Red

**Fragrance:** Cherry

**Pack Size:** 4 x 5 Kg per box

Compatible with liquid biological maintenance products to improve performance in problematic situations or heavy loading

Reduces foul odours such as Hydrogen Sulphide and Mercaptans
