REFINERY and PETROCHEMICALS EU 70

Biological treatment of Hydrocarbon contamination

EU70 Establishes a biomass, in liquids or soils which, under proper conditions, is able to degrade hydrocarbons quickly and efficiently.

The product contains a high concentration of Group 1 non-pathogenic appropriate microorganisms of bacillus and pseudomonas species.

EU70 is designed to improve the performance of biological systems and sludge farming/soil cleanup operations in the following ways:-

- It establishes and maintains a resistant biomass that is able to degrade these difficult and varying wastes.
- It increases the efficiency of hydrocarbon degradation in cleanup operations.
- It produces sludge flocs with superior settling characteristics that assist hydraulically stressed systems.

EU70 SPECIFICATION

Form: Free flowing granular powder.
Colour: Buff to Brown.
Specific Gravity: 0.5 to 0.7
Contents: Selected micro-organisms and surface tension depressants on a soya carrier.

When used as directed **EU70** is completely safe. It is harmless to people, clothing and the environment, and completely biodegradable.

PACKAGING - **EU70** is packed in either 10kg bulk (no pouches) or 250 gram packed into water-soluble pouches (40 per bucket).

BIO-SYSTEMS EUROPE is a trading name of MICROFERM LIMITED
