# EU60 RTU

Biological Drain & Grease Trap Maintenance for Food Service & Industry

## Biological Drain & Grease Trap Maintenance for Food Service & Industry

EU60 RTU is a ready-to-use, non-hazardous liquid designed for maintaining drain lines, pipes, grease traps, and sewers in restaurants, hotels, food processing plants, and pumping wells.

It contains harmless, naturally occurring microorganisms that effectively break down fats, oils, and grease (FOG), preventing clogs, odours, and costly maintenance issues.

### Specifications

**Form:** Liquid (Green, Lemon Scented)

Also available as a 40x concentrate

**Storage Conditions:**

Store in cool, dry place and do not freeze.

Safe for people, animals  
and the environment

### Key Benefits

- ✓ Breaks down fats, oils, and grease (FOG) naturally.
- ✓ Prevents drain blockages and costly repairs.
- ✓ Eliminates odours for improved hygiene.
- ✓ Safe, biodegradable, and eco-friendly.

### How it Works

EU60 contains naturally occurring bacteria that produce enzymes to break down:

- FOG, starch, protein, and organic waste
- Grease buildup in pipes and sewers

Surfactants emulsify grease, making it easier for microbes to digest, ensuring long-lasting drain maintenance.

### Packaging

5L, 25L & 1000L containers

### Application & Dosage

For best results, apply at times of low water flow into the sink or drain furthest from the main outlet. Avoid using hot water, caustic cleaners, or bleach immediately before or after dosing.

Business Type	Daily Dosage
Small Restaurants / Hotels	50ml per day
Large Restaurants	100ml per day
Fast Food Outlets	150 – 200ml per day

EU60 is suitable for both manual application and automatic dosing systems.
